

Airport marking machine «Kontur 100»

General information

This airless machine stripes with cold one-component quick drying traffic paints and glass beads. The striper is equipped with a separate hydraulic drive to achieve a smooth speed control with a high level of speed shift stability. The combination of paint guns allows for application of broad (900 mm) airport marking lines.

Technological properties

Using paint under high pressure while applying marking lines allows to work with high-viscosity paints and paints with heavy percentage of nonvolatile content. Due to these characteristics the paint dries fast and spreads evenly during full coat application. A pedal and a marking mode switch provide that the spray gun switches on at the proper time with the types of the applied marking lines and their quality being predetermined.

Technical specifications

Paint tank capacity	100 kg
Glass beads	45 kg
Road marking speed	2-7 km/h
Dimensions (length x width x height), m:	
-working position	6.8 x 1.4 x 2.1
-transportation position	2.7 x 1.4 x 2.1
Equipped weight	750 kg
Total weight	990 kg

Additional equipment

- Registrator MR10
- Cluster road sign
