

# Road marking machine «Kontur 700HPK»

## General information

It is designed for horizontal marking in city areas and highways, using cold plastic and fast-drying traffic paints with reflective glass beads and anti-skid agents.

It can be used in a moderate climate with the ambient temperature of 5 - 30 °C and relative air humidity of no more than 85 %. In both cases (cold plastic or paint application) the application of glass beads onto marking materials can be done.

## Technological Properties

A marking carriage, a broom, and an operator's seat can be installed on either side of the machine: left or right.

The cleaning of mixers and applicators during plastic application is done with the help of an operator's panel and requires minimum attention from the helping staff, it requires a minimum solvent consumption and the solvent remains good enough for the secondary use.

## Technical specifications

Road marking speed:	
-using traffic paint .....	2-8 km/h
-using cold plastic .....	1-5 km/h
Maximum transportation speed .....	15 km/h
Cold plastic tank .....	460 l
Paint tank .....	435 l
Glass beads tank .....	120 l
Hardener tank .....	30 l
Solvent tank .....	30 l
Dimensions (length x width x height), m:	
-working position .....	5.7 x 2.0 x 2.7
-transportation position .....	5.7 x 2.0 x 2.4
Equipped weight .....	3,500 kg
